EXECUTIVE SUMMARY

Population projections have been prepared for the 8 Economic Regions of Manitoba during the period 1983-2006. These projections are compatible with the official series of Manitoba level population projections adopted by Cabinet for common use within the Manitoba public sector. They are to be reviewed annually along with the official series.

Projections, are not forecasts but are based on what would occur if the stated assumptions hold true. As the process of change is cumulative, the reliability of the projections decreases over time. The information presented in this report is to be treated as statistical projections only and not to be construed in any way as a reflection of government policy objectives.

Under these projections, the population is to increase for all regions in the short term.

For the South West region, with a 1983 population of 108,700, this increase will continue until a projected population of 114,600 is reached in 1994 before declining to 110,900 in 2006.

For the North Central region, with a 1983 population of 46,000, a projected peak population of 47,100 will occur in the years 1991 and 1992 before declining to 44,200 in 2006.

For the Parklands region, with a 1983 population of 53,300, the population is projected to reach a peak of 56,600 during the period 1996-2004 before declining slightly to 56,500 in 2005 and 2006.

For the North, with a 1983 population of 73,200, a peak population of 75,900 is to be projected to be reached in 1990. Negative inter-provincial migration and a decreasing natural increase result in a declining population for the remainder of the projection period (57,100 in 2006).

For the South East, South Central, Winnipeg and Interlake regions, the population of each is projected to increase throughout the projection period even though Manitoba's population is projected to reach a maximum of 1,137,600 in 1997.

Further information on these regional projections can be obtained from David Greenwood of the Manitoba Bureau of Statistics at 945-2989.

INTRODUCTION

This report presents population projections for the 8 Manitoba Economic Regions for the period 1983-2006. These projections are an extension of the official series of Manitoba level population projections adopted for common use within the Manitoba public sector.

The 8 Economic Regions (also known as the Official Regions for Data Collection) are aggregations of the 23 census divisions as follows:

ECONOMIC REGION	CENSUS DIVISIONS	1983 BASE POPULATION
South East	1,2,12	70,600
South Central	3,4	49,200
South West	5,6,7,15	108,700
North Central	8,9,10	46,000
Winnipeg	11	577,800
Interlake	13,14,18	68,400
Parklands	16,17,20	53,300
North	19,21,22,23	73,200
		1,047,200p

p - June 1 preliminary estimate

To make the regional projections compatible with the official series of population projections for the Province of Manitoba, the base population is the Statistics Canada preliminary post-censal estimate of 1,047,200 for June 1, 1983.

However, to use the most up-to-date information on population for the regions, the age-sex distribution from the final post-censal estimate for June 1, 1983 has been used.

Therefore, there are minor discrepancies between the regional base populations for June 1, 1983 and published Statistics Canada estimates.

PROJECTED REGIONAL POPULATIONS: 1983-2006

Table 1 shows the annual projected population for Manitoba and its Economic Regions during the period 1983 - 2006. Based on the projections, the regions fall into two groups.

The regions in the first group (consisting of South East, South Central, Winnipeg and Interlake) are projected to increase in population over the projection period. Each of these regions will also increase their proportion of Manitoba's population. Winnipeg is projected to increase its proportion of Manitoba's population from 55.2% in 1983 to 57.6% by the year 2006. For the South East, the proportion will increase from 6.74% in 1983 to 7.12% in 2006 and for the Interlake from 6.53% in 1983 to 6.81% in 2006. Although the South Central region's population is projected to increase over the projection period, its proportional share is projected to decrease from 4.70% in 1983 to 4.64% by 1990 before increasing to 4.74% in 2006.

The second group (South West, North Central, Parklands and North) are projected to increase in population in the short term and then begin to decrease in population by the end of the projection period. For the North Central and North regions, the population decrease will result in their projected population in the year 2006 being less than their 1983 population.

As a proportion of Manitoba's population, the South West is projected to decrease from 10.4% in 1983 to 9.84% in 2006, North Central from 4.39% in 1983 to 3.92% in 2006 and the North from 6.99% in 1983 to 5.07% in 2006. The Parklands region is projected to decrease from 5.09% in 1983 to 4.98% in 1997 before increasing to 5.01% in 2006.

Details of the projected regional populations are presented in Appendix A - C.

BIRTHS

This section presents the projected births for the 8 Economic Regions to the end of the projection period. For projection purposes, the number of births is determined by the mean age of fertility, modal age of fertility and total fertility rate. Information on these factors and on how they were developed is contained in Appendix D.

Table 2 shows the number of projected births for each of the regions. The number of births is projected to be lower by 2006 for each region with only the South East, Interlake and Parklands regions having a small increase before declining over the rest of the projection period.

TABLE 3: TOTAL FERTILITY RATES BY REGION

	OBSERVED		PROJECTED		
REGION	1976	1981	1986	1991	1996
South East	2.62	2.25	2.08	1.96	1.80
South Central	2.59	2.51	2.27	2.10	1.89
South West	2.19	2.03	1.85	1.72	1.56
North Central	2.41	2.24	2.04	1.90	1.72
Winnipeg	1.70	1.58	1.44	1.34	1.21
Interlake	2.17	1.85	1.71	1.61	1.48
Parklands	2.49	2.28	2.09	1.94	1.76
North	3.17	2.89	2.65	2.46	2.24
Manitoba	2.02	1.86	1.70	1.58	1.45

The projected decreasing fertility rate for all regions (as shown in Table 3) will be the main reason for the reduced number of births. A second reason will be the declining number of women in the peak child bearing years for all regions, except South East and Parklands. In these 2 regions, an increase in the female population for the age groups 20-24 and 25-29 years will moderate the reduction in number of births. The age groups 20-24 and 25-29 years have the highest fertility rates for all regions.

TABLE 4

NOTE: A CENSUS YEAR IS DEFINED AS JUNE 1 - MAY 31

DATA SOURCE: MANITOBA BUREAU OF STATISTICS

DEATHS

This section presents the projected deaths for each of the Economic Regions. For projection purposes, the number of deaths is determined by the life expectancy at birth for each region. Details of the regional life expectancies are presented in Appendix D.

Table 4 shows the projected number of deaths for each region. The number of deaths is projected to increase for all regions except North Central and the North. This general increase is due to the ageing of the population which outweighs the projected increase in life expectancies for all regions (as shown in Table 5).

TABLE 5: PROJECTED LIFE EXPECTANCY AT BIRTH BY REGION

	FEMALE				MALE			
REGION	1983	1986	1991	1996	1983	1986	1991	1996
South East	77.2	77.7	78.3	79.3	71.8	72.2	73.3	74.2
South Central	81.5	81.9	82.6	83.2	75.2	75.6	76.4	77.0
South West	82.9	83.1	83.5	83.9	76.0	76.4	77.1	77.6
North Central	78.0	78.4	79.3	80.9	71.8	72.2	73.3	74.2
Winnipeg	80.2	80.6	81.4	82.1	73.7	74.1	75.0	75.9
Interlake	80.5	80.9	81.8	82.4	73.2	73.6	74.6	75.6
Parklands	81.4	81.8	82.6	83.1	76.3	76.8	77.7	78.1
North	61.5	61.7	62.6	63.5	55.8	56.3	57.2	58.5
Manitoba	79.1	79.7	80.5	81.3	72.5	73.1	74.1	75.1

For the North Central, there is a projected decrease in the number of deaths from 480 in 1983 to 440 by the end of this decade before the number increases to 480 by 2003. This short term decrease in the 1980's is due to the age distribution of the population.

For the North, the number of deaths is projected to remain fairly constant in the short term (780 in 1983 and 760 in 1991) before falling to 680 in 2003. The reduced number of deaths in the 1990's is due to the decreasing population.

For the South East, there is a projected short term decrease in the number of deaths (from 620 in 1983 to 590 in 1990) before increasing to 710 in 2005.

TABLE 6

MIGRATION SCENARIOS

As the most volatile component of population growth, migration has the greatest impact on the year-to-year change in the population of Manitoba's Economic Regions.

For these regional projections, migration is broken into the following components:

i) international
ii) interprovincial
iii) intraprovincial

INTERNATIONAL MIGRATION

International migration is projected to be at a level of 2,530 for Manitoba during each of the years 1985 to 2005. The regional allocation of this projected net migration is assumed to follow the historical pattern of the 7 year period 1976 to 1982. Table 7 shows the historic distribution of international migration by region and Table 6 shows the projected distribution. As can be seen, all regions are projected to gain population through international migration with almost all the net increase occurring in Winnipeg.

TABLE 7: NET INTERNATIONAL MIGRATION BY REGION: 1976 TO 1982

REGION	7 YEAR AVERAGE (1976 TO 1982)	PERCENT DISTRIBUTION OF 7 YEAR AVERAGE	PROJECTED DISTRIBUTION (TO 2005)
South East	151	4.4%	4%
South Central	89	2.6	3
South West	149	4.4	4
North Central	43	1.3	1
Winnipeg	2,831	82.9	84
Interlake	48	1.4	1
Parklands	32	0.9	1
North	71	2.1	2
Manitoba	3,416	100%	100%

INTERPROVINCIAL MIGRATION

Interprovincial migration is the largest component of migration for Manitoba. Table 9 shows the historic distribution of interprovincial migration by region for the period 1976 to 1982. As can be seen, each region lost population due to interprovincial migration over the past 7 year period.

TABLE 9: NET INTERPROVINCIAL MIGRATION BY REGION: 1976 TO 1982

REGION	7 YEAR AVERAGE (1976 TO 82)	PERCENT DISTRIBUTION OF 7 YEAR AVERAGE	PROJECTED DISTRIBUTION TO 2005
South East	-259	4.3%	4%
South Central	-114	1.9	2
South West	-547	9.1	9
North Central	-172	2.9	3
Winnipeg	-3,199	52.9	53
Interlake	-174	2.9	3
Parklands	-160	2.7	3
North	-1,417	23.5	23
Total	-6,043	100%	100%

Table 8 shows the distribution of interprovincial migration over the projection period. For the short term Manitoba is projected to have positive interprovincial migration and this projected population growth has been distributed to all regions. From 1989 until 2005, an interprovincial migration outflow has also been distributed to all regions. This outflow will be largest from Winnipeg (53% of Manitoba figure in 2005) and the North (23%).

INTRAPROVINCIAL MIGRATION

Table 10 show the projected distribution of intraprovincial migration over the projection period. For the Winnipeg and Interlake regions there is a positive intraprovincial migration with all other regions losing population through this component. For the North, there will be a major outflow of population to the other regions of Manitoba.

TABLE 11: NET INTRAPROVINCIAL MIGRATION BY REGION: 1979 TO 1982 AND PROJECTED TO 2005.

REGION	4 YEAR AVERAGE (1979 TO 1982)	PERCENT DISTRIBUTION* OF 4 YEAR AVERAGE	PROJECTED DISTRIBUTION
South East	-73	2.7%	-70
South Central	-186	6.8	-190
South West	-59	2.1	-60
North Central	-180	6.6	-180
Winnipeg	1,223	44.5	1,220
Interlake	152	5.5	150
Parklands	-27	1.0	-30
North	-850	30.9	-850
Manitoba	0**	100%	0

Table 11 shows the historic distribution of intraprovincial migration by region for the period, census years 1979 to 1982. For this component a four year average was chosen because of a high outflow from Winnipeg to surrounding areas in the late 1970's which is not expected to be repeated.

* Based on total of 2,750.

** Provincial total is 2,750 if sign ignored (i.e., annual average number of people moving between regions is 1,375).

TOTAL MIGRATION

Total migration is the sum of the three migration components as described on the previous pages. Table 12 show the projected total migration for each region. For migration purposes, the regions appear to fall into three groups.

The first group, consisting of Winnipeg and the Interlake are projected to have positive total migration for the entire projected period.

The second group, consisting of South Central, North Central and the North are projected to have negative total migration for the entire projection period.

The third group, consisting of South East, South West and Parklands are projected to have some years of positive and some years negative total migration. This group's total migration reflects the variation in projected interprovincial migration. Each of the regions will have a peak migration in 1985-7 then decrease to a minimum in 1996-8 before increasing until 2005. All three regions will have negative total migration by 1990 which will remain negative to the end of the projection period.

NOTE: POPULATION IS AS OF JUNE 1ST OF EACH YEAR

DATA SOURCE : MANITOBA BUREAU OF STATISTICS

FERTILITY

The fertility assumption is expressed as the total fertility rate[1], the expected number of births per woman during the period 15-49 years of age.

Table 3 (page 9) shows the total fertility rate for Manitoba and its Economic Regions on a quinquennial basis from 1976 to 1996. The 1976 and 1981 Manitoba figures are observed rates and the 1986 to 1996 projected Manitoba figures are from the official series of Manitoba level population projections.

The 1976 and 1981 Economic Region figures were calculated from Statistics Canada population figures and the number of births as reported by Vital Statistics Branch, Department of Community Services and Corrections.

The two other factors involved in the birth component of the projection model are mean age of fertility and median age of fertility. These factors have a minimal effect on the outcome of the projection model. Therefore the provincial ages were assigned to each region.

The projected total fertility rates (TFR) for 1986 to 1996 of the Economic Regions were obtained as follows (using the South East region as an example);

1) For 1976, the ratio that each regional total fertility rate is to Manitoba's TFR (2.02) was calculated.

   For the South East, this ratio is $\frac{2.62}{2.02} = 1.297$

2) For 1981, the ratio that each regional TFR is to Manitoba's TFR (1.86) was calculated.

   For the South East, this ratio is $\frac{2.25}{1.86} = 1.210$

3) Regional ratios for 1996 are set as the average of 1976 and 1981 ratios.

   For the South East, the average is $\frac{1.297 + 1.210}{2} = 1.253$

4) Calculate the regional ratios for 1986 and 1991 so there is a constant rate of change between 1981, 1986, 1991 and 1996.

   For the South East, this simple time series is 1.210, 1.225, 1.239 and 1.253. Therefore the 1986 ratio is 1.225 and 1991 ratio is 1.239.

---

1 - Total fertility rate is defined as the sum of the female age-specific fertility rates multiplied by 5 where the age-specific fertility rate is the birth rate per woman in the respective 5 year age period from 15-49 years of age.

5) For 1986, multiply the regional ratios by the Manitoba TFR (1.70) to obtain the regional TFR.

   For the South East, the regional TFR is projected to be 1.225 x 1.70 = 2.08

6) For 1991, multiply the regional ratios by the Manitoba TFR (1.58) to obtain the regional TFR.

   For the South East, the regional TFR is projected to be 1.239 x 1.58 = 1.96.

7) For 1996, multiply the regional ratios by the Manitoba TFR (1.45) to obtain the regional TFR.

   For the South East, the projected regional TFR is 1.253 x 1.45 = 1.82.

8) The regional total fertility rates obtained for 1996 were assumed to hold until 2005.

9) The regional TFR were adjusted downward slightly to make the sum of the projected regional births equal the number of births for Manitoba in the offical series of population projections.

   For the South East, the TFR during the period 1996 to 2005 was reduced from 1.82 to 1.80.

As the mean age of fertility and modal age of fertility have little effect on the number of births in the model used for these projections, the 1981 values have been assumed to remain constant throughout the projection period.

In 1981, the mean age of fertility for Manitoba was 25.6 years and the modal age of fertility was 25.5 years. For Canada the corresponding figures were 26.1 and 26.5 years.

MORTALITY

The mortality assumption is expressed as the life expectancy at birth, the number of years a person is expected to live after birth.

Table 5 (page 11) shows the projected life expectancy at birth by region of females and males for the years 1983, 1986, 1991 and 1996. Table D1 below shows the life expectancy at birth for 1981.

TABLE D1: OBSERVED LIFE EXPECTANCY AT BIRTH BY REGION: 1981.

REGION	FEMALE	MALE
South East	76.9	71.9
South Central	81.1	74.8
South West	82.8	75.5
North Central	77.7	71.3
Winnipeg	79.8	73.2
Interlake	80.1	72.7
Parklands	81.0	76.0
North	61.1	55.3
Manitoba	78.7	72.1

These life expectancies at birth were obtained from Manitoba Regional Life Tables 1980-82, a paper produced by Manitoba Bureau of Statistics in February 1985. Data sources used in this paper were the Statistics Canada 1981 Census population and the number of deaths for 1980-82 (calendar years) as reported by Vital Statistics Branch, Manitoba Community Services and Corrections.

The regional life expectancies for 1983 to 1996 were then increased by an amount equal to the increase in life expectancies for Manitoba males and females over the projected period. When incorporated into the projection model, these regional figures resulted in the sum of regional deaths being less than the number of projected deaths from the official series of population projections. The regional life expectancies were then adjusted until the sum of regional deaths equalled the number of projected deaths for Manitoba under the official series of population projections.
